

... ONLY AT **Power Test, Inc.**

Power Test is proud to introduce its newest line of high speed engine dynamometers, the **"Z" Series**.

- **High Speed Gas and Diesel Applications**
- **High Efficiency, Long Life Cast-Iron Body**
- **Portable or Fixed Base Models Available**

The Z-Series Dynamometers are specifically designed for testing high speed gasoline and diesel engines. The Z-Series Dynamometer is offered in a fixed base unit and also as a portable unit.

The cast iron bodies are what make these units so powerfully strong compared to similar dynamometers in the industry. Superior engineering combined with ease of use facilitate your testing procedures. Z-Series portable dynos accommodate SAE #1 to #5 size flywheel housings for a wide range of testing capabilities. Combining the Z-Series dynamometers with PowerNet LT, our fully automated dynamometer control system, all of your testing needs may be performed at the touch of a button.

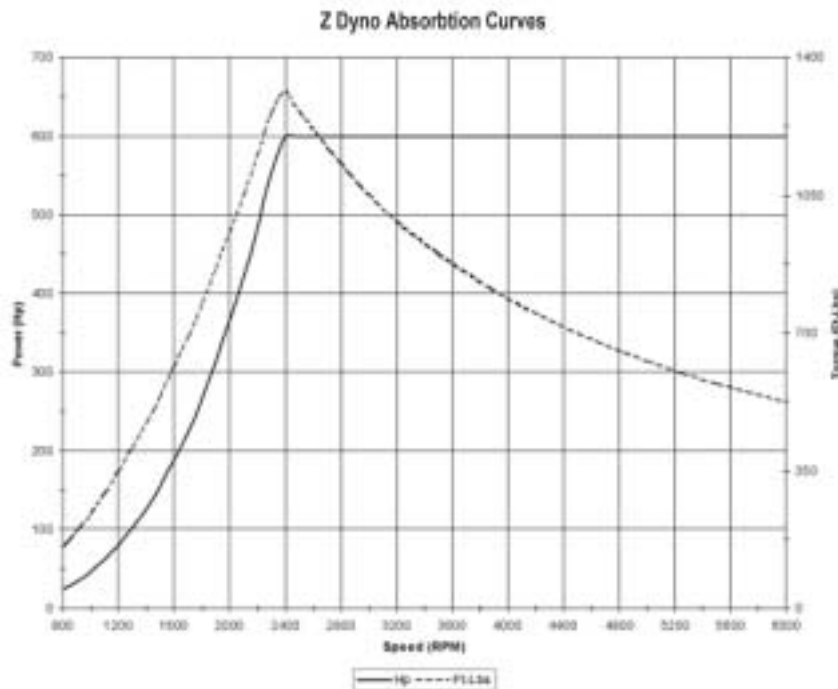

Z-Series Engine Dynamometers from Power Test

Features:

With an engine speed range of up to 6,000 rpm and capabilities of up to 500 horsepower, the Z-Series Engine Dynamometers are an efficient way to test most high-performance diesel and gasoline engines.

The Z-Series Dynamometers feature a stainless steel shaft and use positive water seals, which replaces traditional packings, eliminating typical maintenance requirements.

Power Test, Inc. has been manufacturing and delivering high-performance, long-life water brake dynamometers since 1976. Our product lines include engine dynamometers up to 6,000 hp, and 6,000 rpm, dual dynamometers, electric motor test systems, multi-axle chassis dynamometers, and our dynamic PowerNet Data Acquisition Software. See what Power Test can do for your testing facility. Our engineers are available to assist in the facility planning stage.
